

**ABSTRACT OF THE DISCLOSURE**

In a method and system for wireless management of  
a server, an electronic apparatus is connected to a  
first wireless transmission device having a first  
5 identification code exclusive thereto. The server is  
connected to a second wireless transmission device  
having a second identification code exclusive thereto.  
A wireless communications link is established between  
the electronic apparatus and the server via the first  
10 and second wireless transmission devices.
